

INTERNATIONAL INSTITUTE OF WELDING

A world of joining experience

WELDING IN THE WORLD

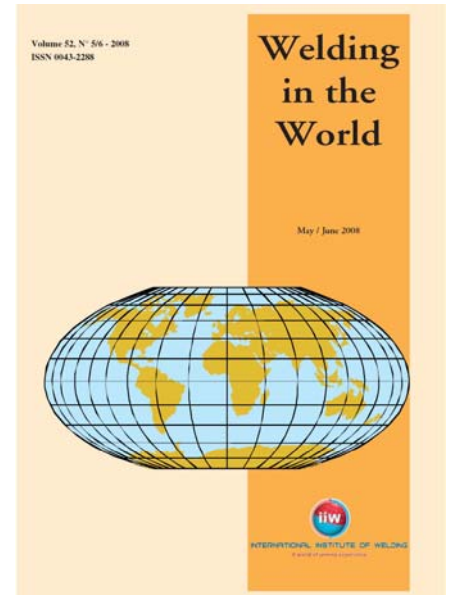

The worldwide reference in the fields of welding and joining

Welding in the World has been the flagship publication of the International Institute of Welding (IIW) since 1963, highlighting the best achievements of the global professional and academic welding fraternity.

The bi-monthly scientific and technical journal features authoritative papers on all aspects of welding, brazing, soldering, cutting, thermal spraying and other allied joining techniques.

These technical and research papers or guidelines are first assessed and then recommended for publication by experts from the IIW's 25 Working Units, representing the national delegations of the organization's 53 member countries. Selected authors originate from the four corners of the globe, with ***Welding in the World*** providing the ideal forum for regular knowledge exchange.

Further, research papers are now subjected to a rigorous peer review process, involving some 250 eminent figures from the international academic community.

Three good reasons to read *Welding in the World*

- * **Research Papers** – Discover the latest innovative developments and procedural advances
(processes, material-related interactions, weldability, testing, simulation ...)
- * **Technical Papers** – Examine the numerous applications of welding in the various industrial sectors, in consideration of both economical and environmental aspects
(metallurgy, nuclear engineering, civil engineering, quality assessment ...)
- * **Guidelines** – Gain information on best practices and other pertinent issues in all areas of welding
(fatigue testing, corrosion, fitness for service, health and safety ...)

Science Citation Index

Welding in the World is currently under assessment by the prestigious Science Citation Index, with a view to the journal's registration in late 2009.
